Report for phd.bib

Your database was read and has the following general characteristics:

- total publications: 347
- ignored entries: 3
- number of authors: 449

Network analysis

The paper network is built by connecting papers that share authors. If *paper A* shares an author with *paper B* and *paper B* shares an author with *paper C*, then *A*,*B* and *C* are in a connected component. **These components might show communities of researchers.**

- The largest connected component has 139 (40%) papers.
    - One element of that component is:

`lake2015explainingthepastwithabmonmodellingphilosophy`

- the second largest group contains 5 (1%) papers.
- 108 papers (31%) of your research don't share authors with any other paper.
